

Lê Thị Luyến

MANUAL QA / QC TESTER

Frontend Engineering Background

Date of birth: 12/10/1989

Phone: 086 522 4131

Email: leluyen89@gmail.com

Portfolio: <https://luyenle.github.io/qa-portfolio/>

Test artifacts (Test Case + Bug + API): [Google Sheets workbook](#)

PROFESSIONAL SUMMARY

Manual QA / QC Tester with 2+ years of QA/QC experience and 8+ years of frontend engineering experience. Strong in manual and functional testing, with hands-on API testing, SQL / database and data validation, defect investigation, and AI-assisted QA workflows. QA is my primary focus; the frontend background supports UI/UX validation and investigating defects from both the user and technical sides. I also use AI to speed up repetitive QA tasks and build lightweight QA productivity tools that reduce manual work, with human review and QA judgment kept in control.

- Requirements analysis, test case and test scenario design; functional, regression, negative, boundary and integration testing
- AI-assisted test-case, test-data and test-flow generation with human review; self-built Python QA utilities and reusable checklists that cut repetitive manual work

WORK EXPERIENCE

VHV

QA / Manual QA Tester | 2026 – Present

Testing large-scale systems including Digital School Records, national database systems and K-12 online products.

- Analyse requirements and design test cases and test scenarios for core functional areas
- Functional, negative, boundary, integration and regression testing
- Role and permission validation across user types
- REST API testing with Postman (GET / POST / PUT), HTTP methods, token-based authentication, response and error-handling validation
- SQL / database validation and data-integrity checks against expected results
- Information-security-oriented testing within project scope
- Defect reporting, investigation and retesting; collaboration with development and product teams
- Used AI to accelerate repetitive QA preparation — test-case, test-data and test-flow generation — with human review, and built reusable QA checklists and Python QA utilities to reduce repetitive manual work

Freelance

Manual Tester (Project-based) | 2025

- Requirement analysis and test case design for core features
- Functional, UI and regression testing; test-data design and edge-case testing
- Defect logging and tracking; coordination with developers on fixes
- API testing with Postman (GET / POST, response validation)
- Test cases, bug reports and test documentation

Bluecom Vietnam / Isobar / Merkle (Dentsu Group)

Frontend Developer | 2016 – 2024

- Built web interfaces for large-scale client projects (HTML, CSS, JavaScript), including Salesforce Commerce Cloud
- UI/UX analysis; ensured implementation matched the design
- Frontend debugging and defect resolution

- Worked with APIs; understood request / response structures
 - Close collaboration with QA / BA / Dev in Agile / Scrum
 - Product quality checks before release
-

Codespot

Manual Tester / Manual QC | 2013 – 2015

- Functional and UI testing for web projects
- Wrote test cases and executed testing against them
- Detected and reported defects; coordinated with developers
- Retested after bug fixes

Frontend Developer | 2015 – 2016

- Built web interfaces with HTML, CSS, JavaScript
 - Fixed UI defects and improved user experience
 - Worked with APIs and supported frontend integration
-

QA PORTFOLIO & PROJECTS

Live portfolio: <https://luyenle.github.io/qa-portfolio/> — detailed QA profile, 6 self-built QA productivity tools and 8 reusable QA checklists that streamline repetitive QA work, an AI-assisted QA workflow, and a sample test-case artifact.

Login Module Testing

- Wrote 15+ test cases (positive, negative, edge cases); bug reports with full detail (severity, priority, steps)
- API login testing with Postman — 200 login success, 400 missing email / password, 400 user not found
- Response validation: status code, JSON structure, error message

Details: [Test case + Bug + API workbook](#)

SKILLS

Testing: Test case, test scenario and test checklist design; test plan; functional, regression, negative, boundary, integration and exploratory testing; role / permission validation; UI/UX validation; defect reporting, investigation and retesting

API Testing: Postman (GET / POST / PUT), HTTP methods; response validation (status code, JSON structure, error messages); token-based authentication; request / response structure

Database & Data: SQL (SELECT, JOIN); data validation, database validation and data-integrity checks

AI-Assisted QA: AI-assisted test-case, test-data and test-flow generation; edge-case suggestions; bug and API-response analysis; AI used as a QA productivity layer, always with human review and QA judgment

QA Productivity & Automation: spot repetitive QA work; build lightweight, reusable Python tools and utilities to reduce it and streamline day-to-day QA workflows

QA Fundamentals: SDLC & STLC and the QA role at each stage; bug lifecycle (log, track, retest, close); API testing fundamentals (request / response, status codes, error handling)

Technical Background (Frontend): HTML, CSS, JavaScript, React, SCSS, Tailwind CSS, Bootstrap; Salesforce Commerce Cloud; responsive UI; frontend / backend interaction

Tools: Jira, Postman, Git, Chrome DevTools, Google Sheets, Python (QA utilities)

EDUCATION

- Bachelor of Information Technology — University of Natural Sciences, Vietnam National University Ho Chi Minh City (2013)
-

ADDITIONAL INFORMATION

- Detail-oriented in UI/UX validation; investigates defects from both user and developer perspectives; comfortable tracing issues across UI, API and data layers
- Builds small reusable utilities to remove repetitive QA work; uses Chrome DevTools for frontend debugging; works independently and collaborates with Dev and Product teams; available to start immediately
